ABOUT COMPANY

Since 2011, we have been promoting agricultural technology to assist our farmers in modernising their farming techniques. We began with fogging machines and agricultural equipment and have progressed towards researching and developing new technologies to assist our clients in improving and enhancing their services. To supply our clients with the most up-to-date technology, we have expanded our scope of services to include protective cultivation, such as turnkey creation of polyhouses and net houses.

OUR VISION

We think that client happiness is measured by their success and growth, and that there is no better way to gauge skill than this. As a result, we are committed to enhancing and improving our quality in order to provide customers with excellent products and services. We agree that perseverance and commitment to the task at hand are crucial qualities to cultivate. We also believe that simply selling the products is insufficient; offering after-sales support is as important as the product itself.

WHY US

We at Sai Shree Enterprises mostly deal in equipment and items that require adequate demonstration so that customers grasp the product's do's and don'ts from the start. At the same time, we feel that the products we sell require prompt after-sales support in order to keep the machines functioning smoothly. We have technicians who are trained to provide after-sales service for the products and services we offer. We also have a stock of spare parts for product repairs so that our customers don't have to go elsewhere. We attempt to provide a one-stop shop for all of our products in terms of sales, service, repairs, and spare parts. We are not just here because we can make fogging machine, Our founder **DR. VIDIT SHAH** has been awarded PHD in **"IMPORTANCE OF FOGGING MACHINE FOR CONTROL OF MOSQUITO MENACE"** by **AIIPPHS STATE GOVERNMENT UNIVERSITY DELHI**. This knowledge & experience translate into our premium quality products & services.

PROTECTIVE CULTIVATION

ABOUT PROTECTIVE CULTIVATION

IN THE PRESENT DAY THE OPEN FARMING IS SUFFERING A LOT DUE TO UNPREDICTABLE WEATHER AND CLIMATIC CONDITIONS. IN CONVENTIONAL AGRICULTURE PRACTICES, THE CROP IS GROWN IN OPEN AREA UNDER NATURAL CONDITIONS AND ARE VULNERABLE TO UNCONTROLLED CHANGES IN CLIMATE LIKE TEMPERATURE, RAINFALL, HUMIDITY, ETC WHICH AFFECTS THE QUALITY AND YIELD OF CROP MAY DECLINE. IT IS THE NEED OF HOUR TO SHIFT TOWARDS THE METHOD OF CONTROL FARMING WHICH YIELDS BETTER RESULTS DUE TO CONTROLLED ENVIRONMENTAL CONDITIONS. POLYHOUSE/NET HOUSE FARMING IS AN ALTERNATIVE NEW TECHNIQUE OF AGRICULTURE IN INDIA. IT REDUCES DEPENDENCY ON RAINFALL AND MAKES THE OPTIMUM USE OF LAND AND WATER RESOURCES. POLYHOUSES/NET HOUSES ARE STRUCTURES UTILIZED AS PROTECTIVE CULTIVATION TO MAKE THE PLANTS GROW WELL IN UNFAVORABLE CLIMATE.
